Ruby

Monocrystalline aluminum oxide based ceramics balls, the typical red colour of ruby is due to small amounts of impurities. They provide excellent hardness, corrosion resistance and high temperatures resistance properties, good wear resistance and dimensional stability. They are auto lubricant and easy polishing materials.

Field of application

Bearings, special pumps and valves (chemical pumps, safety valves), measuring instruments, balls for pens and tips for probes, optical applications, flow meters, styli.

Corrosion resistance

Good corrosion resistance in contact with (even strong) acids, alkalis and halogens, even at high temperatures
